

Name: Tejas Rahul Rokade

Reg. No.: 20BDS0033

Create a Load balancer using AWS and Test its running with sample set of web servers

Create two instances and while creating the instance in advance setting under user data give below commands:

Instance 1

```
#!/bin/bash
```

```
Yum install httpd -y
```

```
Systemctl enable httpd
```

```
Mkdir /var/www/html/orders
```

```
Echo "<h1>This is Orders App (20BDS0033)</h1>" >
```

```
/var/www/html/orders/index.html
```

```
Systemctl start httpd
```

Instance 2

```
#!/bin/bash
```

```
Yum install httpd -y
```

```
Systemctl enable httpd
```

```
Mkdir /var/www/html/payments
```

```
Echo "<h1>This is Payments App (20BDS0033)</h1>" >
```

```
/var/www/html/orders/index.html
```

```
Systemctl start httpd
```

Instances | EC2 Management Console | ap-south-1.console.aws.amazon.com/ec2/home?region=ap-south-1#Instances:instanceState=running

Instances (2) Info

Instance state: running

Name	Instance ID	Instance state	Instance type	Status check	Alarm status	Availability Zone	Public IP
Load_Balancer_2	i-02cd6bda7c00c7a6	Running	t2.micro	Initializing	No alarms	ap-south-1a	ec2-13-12
Load_Balancer_1	i-0a7733fe59321c9a5	Running	t2.micro	2/2 checks passed	No alarms	ap-south-1b	ec2-43-20

Creating Load Balancer

Load balancers | EC2 Management | EC2 Instance Connect | EC2 Instance Connect | 43.204.218.232/orders/ | 13.126.14.215/payments/ | + | - | x |

ap-south-1.console.aws.amazon.com/ec2/home?region=ap-south-1#CreateALBWizard:

Services Search for services, features, blogs, docs, and more [Alt+S]

Network mapping info

The load balancer routes traffic to targets in the selected subnets, and in accordance with your IP address settings.

VPC info

Select the virtual private cloud (VPC) for your targets. Only VPCs with an internet gateway are enabled for selection. The selected VPC cannot be changed after the load balancer is created. To confirm the VPC for your targets, view your target groups [\[2\]](#).

vpc-008d283763760bf43
IPv4: 172.31.0.0/16

Mappings info

Select at least two Availability Zones and one subnet per zone. The load balancer routes traffic to targets in these Availability Zones only. Availability Zones that are not supported by the load balancer or the VPC are not available for selection.

☒ ap-south-1a

Subnet
subnet-0e3f599d3b533e1b6

IPv4 settings

Assigned by AWS

☒ ap-south-1b

Subnet
subnet-003438e6337d0c57

Security groups info

A security group is a set of firewall rules that control the traffic to your load balancer.

Load balancers | EC2 Management console

ap-south-1.console.aws.amazon.com/ec2/home?region=ap-south-1#CreateALBWizard:

Listeners and routing

A listener is a process that checks for connection requests using the port and protocol you configure. The rules that you define for a listener determine how the load balancer routes requests to its registered targets.

▼ Listener HTTP:80

Protocol: HTTP Port: 80

Default action: Forward to Instance1-20BD50033 (Target type: Instance, IPv4)

Create target group

Add listener

▼ Add-on services - optional

Additional AWS services can be integrated with this load balancer at launch. You can also add these and other services after your load balancer is created by reviewing the "Integrated Services" tab for the selected load balancer.

☐ Create an accelerator to get static IP addresses and improve the performance and availability of your applications. Additional charges apply

Load balancers | EC2 Management console

ap-south-1.console.aws.amazon.com/ec2/home?region=ap-south-1#CreateALBWizard:

Summary

Review and confirm your configurations. Estimate cost

Basic configuration Edit

20BD50033_Load_Balancer

- Internet-facing
- IPv4

Security groups Edit

- default sg-0d744a323f95b6e22

Network mapping Edit

VPC: vpc-008d283763760bfd3

- ap-south-1a subnet-0e3f99d5b553e1b6
- ap-south-1b subnet-0291428c51107d5a5
- ap-south-1c subnet-03161e30873636b74

Listeners and routing Edit

- HTTP:80 defaults to Instance1-20BD50033

Add-on services Edit

None

Tags Edit

None

Attributes

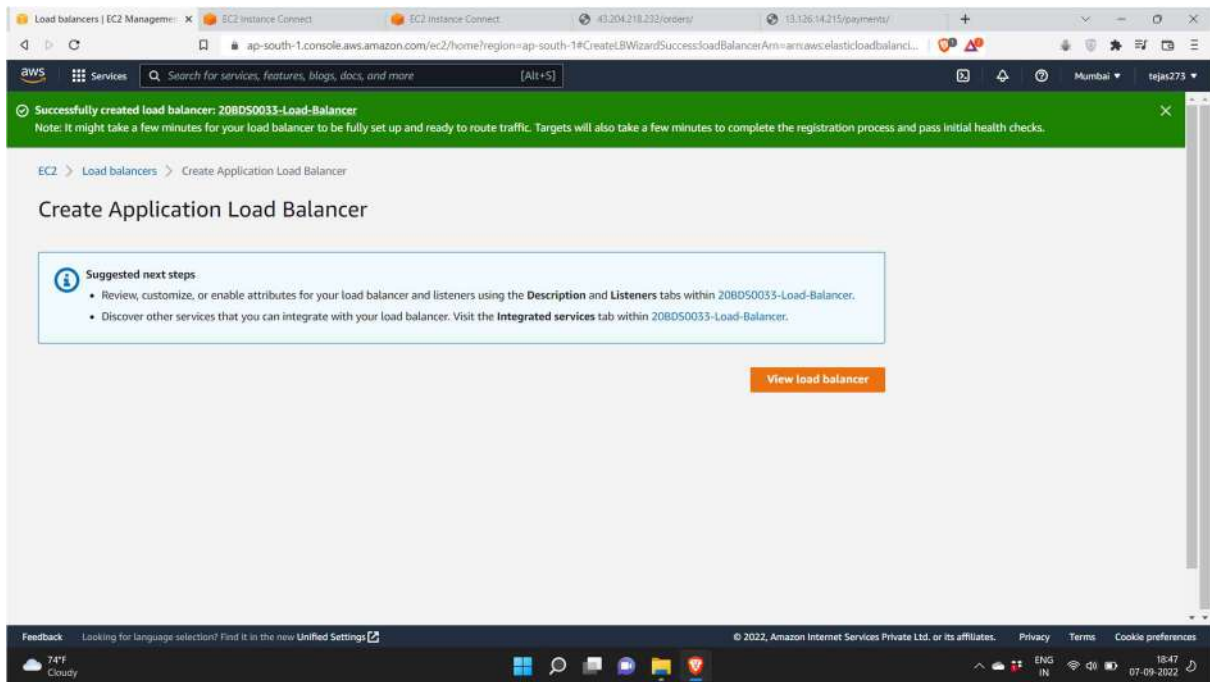

Certain default attributes will be applied to your load balancer. You can view and edit them after creating the load balancer.

Cancel Create load balancer
